Kind of a cover sheet.

Thank you for your interest in me and what I can do for your company. This will probably be unlike any other resume that you've had to view because it is difficult to consolidate all of my abilities and strengths into a single funnel of information into your eyeballs. What you are looking at is basically 35 years of trials and tribulations that we call experience filtered down into a relatively bite-sized tidbits. Please let me know what questions I can answer for you.

What am I?

A hardware/software/network designer/engineer/programmer. I am well versed in computer science and software engineering, equivalent to BS/MS level. I am highly motivated; a quick learner with strong interpersonal skills and a positive attitude. I am very productive working on my own, yet a strong collaborator in large groups. I am a bugmagnet, and manage to uncover even very obscured bugs... sometimes even on purpose.

Abilities, Achievements and Activities:

- * Proven track record driving products from concept to delivery.
- * Programming ingenuity.
- * Outstanding QA ability to debug.
- * Award-winning leadership skills motivate a team to full potential.
- * Vast knowledge of operating systems, software, and hardware.
- * Strong background in network and system security and encryption.
- * Developed a product featured on Apple's Mac OS X site.
- * Created products used for Babylon5 and other TV shows.
- * Patented an intelligent HTTP content cache.
